Reduce Urban Runoff, Save Money and Cut Your Water Use with a FREE Water Survey

You may also qualify for a FREE State-of-the-Art Irrigation Controller

Culver City, CA—Getting 'serious' about water conservation, West Basin Municipal Water District ('West Basin'), the City of Culver City ('Culver City'), and Golden State Water Company ('Golden State') are giving away FREE water efficiency devices for outdoor use to residents who qualify for the program. Residents must sign up for their audit by Weds. July 23rd.

West Basin's Green Garden program provides free outdoor residential audits for homeowners to learn where to cut water use, reduce waste and determine whether they qualify for a state-of-the-art, water efficient irrigation controller and rotating sprinkler nozzle.

Sixty to eighty percent of southern California water use at home is outdoors. The water piped to our homes is imported, potable water that has been treated to meet drinking water quality standards. Conserving water at home by using less will save money on your water bill and conserve precious drinking water.

Culver City recently adopted West Basin's "It's time to get serious" water conservation campaign. The proclamation declares Culver City's intention to review its ordinances, policies and programs to help residents and businesses do their part to conserve water.

With Governor Schwarzenegger's recent declaration that California is in a drought caused by climate change, a court-ordered 30% reduction in imported water from northern California, eight years of drought on the Colorado River, and a below average snow pack, makes free outdoor water audits for residents an extremely important and timely program.

To find out if you qualify for a FREE water-efficiency survey, call 866-861-0784. In addition to West Basin, Culver City, and Golden State, this program is co-sponsored by Metropolitan Water District of Southern California and U.S. Bureau of Reclamation.
